

Annual Ryegrass

Technical Sheet

Germination occurs on average in 7 - 10 days.

This cool season bunch grass has a heavy, extensive, fibrous root system. It prefers well drained loam or sandy loam soils, but establishes well on many soil types including poor or rocky soils. Well suited as a cover crop in grass waterways or riparian areas subject to flooding because it tolerates wet soils and temporary flooding.

It helps to prevent erosion, improve soil structure and drainage, adds organic matter, suppresses weeds and will scavenge for nutrients.

Good choice for fast, temporary cover on exposed areas with minimal seed bed preparation, as in construction and burned areas.

SEEDING RATE

5 - 10 lb. per 1,000 sq. ft. for new seeding

3 - 5 lb. per 1,000 sq. ft. for overseeding

7 - 10 lb. per 1,000 sq. ft. for hydroseeding
