

HYDROGEL B

DESCRIPTION

FINN HydroGel B is a polymer that is able to store water and nutrients up to 500% its own size and weight. Once HydroGel B releases its stored moisture and nutrients to the root system, it will replenish itself with the next rainfall or irrigation. Finn HydroGel B is a plant watering aid used to reduce or eliminate stress caused by a lack of moisture.

APPLICATION & RATES

HYDROSEEDING Mix approximately 2.5 lbs. of HydroGel B to an agitated tank containing 800 gallons of water. Add sufficient seed to cover 10,000 square feet. Rates will vary depending on amount and types of fertilizer.
